1960 Ford Color Combinations→

ISSUED NOVEMBER 3, 1959

1960 FORD COLOR COMBINATIONS

Over-all combinations are so indicated on Sheets 1 and 2 of this Bulletin.

Two-tone combinations are not available but are identified on the cars by their respective color letter codes. The first letter being the Upper color, the second being the Lower color.

Color code letters appear on the left front body pillar extension.

NOTE: Most colors in this bulletin are available in both DUCO and DULUX; however, it should be noted that it is not always possible to make close matches in DUCO to DULUX colors and vice versa.

Every possible precaution is taken to provide the refinish trade with accurate DUCO and DULUX color matches. Due to circumstances beyond our control, we cannot be responsible for inaccurate color matches resulting from changes in standards by automobile manufacturers without our knowledge, change of car colors on aging, and color variances caused by application methods, etc. We will assume responsibility only for factory color matches to established Du Pont color standards.

As the accuracy of color matches made with the Du Pont Color Blending Service depends on the individual operating the equipment, we will assume responsibility only for the uniformity of our mixing enamels and lacquers.

INTERIOR COLORS

NOTE: DUCO mixing machine formulas, only, are offered for the following interior colors:

DUCO Formula File Number	Color	M-4J Part Number

1961 FORD COLOR COMBINATIONS

Over-all combinations, for all cars, are so indicated on the Color Chip Sheets of this Bulletin.

Two-tone combinations, with the exception of Falcon and Comet, are not available but are identified by their respective color combination letters.

Two-tone combinations for Falcon and Comet are designated by two letters and a number suffix. The first letter being the Lower Color; the second letter, the Upper Color.

LOCATION OF COLOR COMBINATION LETTERS

Ford, Thunderbird, Mercury and Lincoln Continental combinations are on a Patent Plate located on the left front body pillar between the front door hinges.

Comet and Falcon combinations are on a Patent Plate located on the rear face of the left front door.

NOTE: Every possible precaution is taken to provide the refinish trade with accurate DUCO® or LUCITE® Acrylic Lacquer and DULUX® color matches; however, it should be noted that it is not always possible to make close matches in DUCO or LUCITE Acrylic Lacquer to DULUX colors and vice versa.

Due to circumstances beyond our control, we cannot be responsible for inaccurate color matches resulting from changes in standards by automobile manufacturers without our knowledge, change of car colors on aging, and color variances caused by application methods, etc. We will assume responsibility only for factory color matches to established Du Pont color standards.

As the accuracy of color matches made with the Du Pont Color Blending Service depends on the individual operating the equipment, we will assume responsibility only for the uniformity of our mixing enamels and lacquers.

IMPORTANT—See Reverse Side→

IMPORTANT

Refinish DUCO® Lacquer Colors shown in this bulletin will be replaced with LUCITE® Acrylic Lacquer Colors using the same Stock Number with appropriate suffix as soon as they are developed and become available.

1962 FORD MOTOR CO. COLOR COMBINATIONS

Over-all combinations, for all cars, are so indicated on the Color Chip Sheets of this Bulletin.

Two-tone combinations, with the exception of Falcon and Comet, are not available but are identified by their respective color combination letters.

Two-tone combinations for Falcon and Comet are designated by two letters and a number suffix. The first letter being the Lower Color; the second letter, the Upper Color.

LOCATION OF COLOR COMBINATION LETTERS

Ford, Thunderbird, Mercury and Lincoln Continental combinations are on a Patent Plate located on the left front body pillar.

Comet and Falcon combinations are on a Patent Plate located on the rear face of the left front door.

NOTE: Every possible precaution is taken to provide the refinish trade with accurate DUCO® or LUCITE® Acrylic Lacquer and DULUX® color matches; however, it should be noted that it is not always possible to make close matches in DUCO or LUCITE Acrylic Lacquer to DULUX colors and vice versa.

Due to circumstances beyond our control, we cannot be responsible for inaccurate color matches resulting from changes in standards by automobile manufacturers without our knowledge, change of car colors on aging, and color variances caused by application methods, etc. We will assume responsibility only for factory color matches to established Du Pont color standards.

As the accuracy of color matches made with the Du Pont Color Blending Service depends on the individual operating the equipment, we will assume responsibility only for the uniformity of our mixing enamels and lacquers.

NOTES AND EXPLANATION OF SYMBOLS

*DULUX® mixing machine formula only. ★Indicates a DULUX mixing machine formula is not available. ■Available in factory package only. Consult the mixing machine formula file cabinet for the availability of LUCITE® Acrylic Lacquer formulas.

NOTE: It may be necessary, at times, to tint colors to produce a satisfactory match due to normal weathering and changes in color standards.

NOTE: LUCITE Acrylic Lacquer is recommended for panel repair and overall refinishing of baked or aged air-dry enamels (over properly sanded and sealed surfaces). DUCO® Lacquer is recommended if spot repair of these enamels is desired.

NOTE: Where semi-gloss is required, the addition of #4528 Flattening Compound is recommended in accordance with label directions.

AUTOMOTIVE REFINISH COLORS

1964

FORD MOTOR COMPANY

FORD

LINCOLN CONTINENTAL

MERCURY

1964 FORD MOTOR COMPANY COLOR IDENTIFICATION

TWO-TONE COMBINATIONS

FORD, MERCURY AND LINCOLN CONTINENTAL

The first letter of a two-letter paint code identifies the main body color. The second letter identifies the roof color. (For example, the combination YM on a Ford would indicate the lower main body finished in Skylight Blue and the roof area in Wimbledon White.)

Paint codes for all models are shown on the warranty plate located on the rear face of the left front door.

LUCITE® Acrylic Lacquer or DULUX® Enamel is recommended for panel repair and overall refinishing of baked or aged air-dry enamels (over properly sanded and sealed surfaces). DUCO® Lacquer is recommended for spot repair of these enamels when desired.

NOTE: It may be necessary, at times, to tint colors to produce a satisfactory match due to normal weathering and changes in color standards.

MERCURY

1966 FORD MOTOR COMPANY COLOR IDENTIFICATION

FORD, LINCOLN CONTINENTAL AND MERCURY TWO-TONE COMBINATIONS

The first letter of a two-letter paint code identifies the body color. The second letter identifies the roof color. (For example, the combination YM on a Ford would indicate the body finished in Silver Blue and the roof area in Wimbledon White.)

LOCATION OF PAINT CODE PLATE

Paint codes for all models are shown on the plate located on the rear face of the left front door.

LUCITE® Acrylic Lacquer is recommended for SPOT REPAIR, panel repair and overall refinishing of all original automotive finishes. DULUX® Enamel may also be used for panel repair and overall refinishing.

NOTE: It may be necessary, at times, to tint colors to produce a satisfactory match due to normal weathering and changes in color standards.

Paint codes for all models are shown on the plate located on the rear face of the left front door.

LUCITE® Acrylic Lacquer is recommended for SPOT REPAIR, panel repair and overall refinishing of all original automotive finishes. DULUX® Enamel may also be used for panel repair and overall refinishing.

NOTE: It may be necessary, at times, to tint colors to produce a satisfactory match due to normal weathering and changes in color standards.
