**PONTIAC**

www.backman.se

1970 GENERAL MOTORS CORPORATION COLOR IDENTIFICATION

TWO-TONE COMBINATIONS
<b>CHEVROLET, BUICK AND PONTIAC</b>
The first letter of a two-letter paint code identifies the body color. The second letter identifies the roof color. (For example, the combination 28-10 on a Pontiac would indicate the body finished in Atoll Blue Metallic and the roof area in Polar White.)
<b>OLDSMOBILE</b>
The first letter identifies the body color and the second letter identifies the roof color. The third letter, when used, identifies the wheel color.
<b>CADILLAC</b>
The first two numbers identify the body color and the last two numbers identify the roof color.

LOCATION OF PAINT CODE PLATE

General Motors paint code plate for all models is located on the "horizontal" or "vertical" surface of the shroud upper panel on the left side of the body.

DULUX® is not recommended for the repair of LUCITE® or other Acrylic Lacquer finishes.

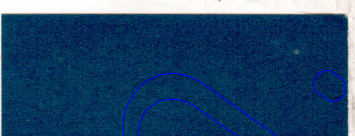

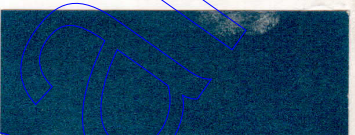

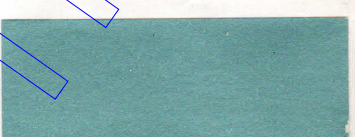

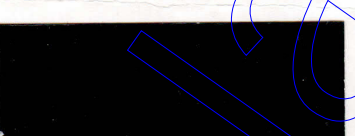

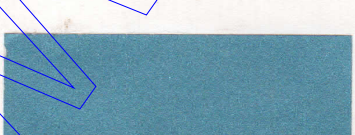

**NOTE:** It may be necessary, at times, to tint colors to produce a satisfactory match due to normal weathering and changes in color standards.

CHEVROLET, BUICK, OLDSMOBILE, PONTIAC AND CADILLAC

TWO-TONE COMBINATIONS

The First Paint Code identifies the body color. The second Paint Code identifies the roof color. (For example, the combination 24-11 on a Pontiac would indicate the body finished in Adriatic Blue and the roof area in Cameo White.)

LOCATION OF PAINT CODE PLATE

General Motors paint code plate for all models is located on the "horizontal" or "vertical" surface of the shroud upper panel on the left side of the body. Corvette paint code plate is located on the hinge pillar of the left hand door.

DULUX® is not recommended for the repair of LUCITE® or other Acrylic Lacquer finishes.

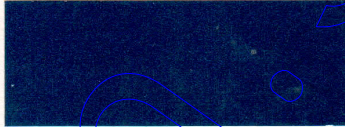

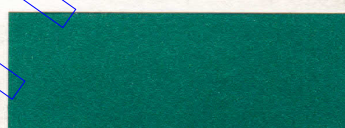

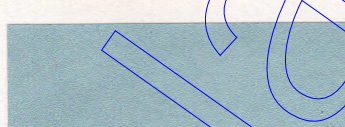

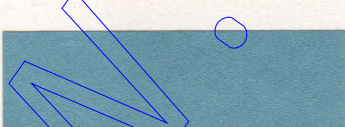

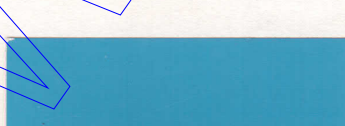

**NOTE:** It may be necessary, at times, to tint colors to produce a satisfactory match due to normal weathering and changes in color standards.
