

To whom Xyliderm is meant for?

Xyliderm is suitable if you have various skin problems:

Atopic skin	 Xylitol adds the amount of filaggrin on the skin and speeds up the skin's own creation of protection. 80% of people having atopic skin suffer from deficiency of filaggrin
	 Many people having atopic skin suffer from staphylococcal infection on the skin, which aggravates symptoms of atopy. Xylitol prevents formulation of bacterial infection.
Psoriasis	Alleviates tightness and itching of psoriatic skin.
Dry and irritated skin	 Xyliderm's xylitol and glycerin bind moisture on the skin and effectively reduce itching and flaking caused by dryness
	 Xylitol speeds up the arising of skin's own protective layer.
Acne	Does not clog pores
	Anti-bacterial effect of xylitol calms inflammation without drying the skin
Hand eczema	Relieves itching and irritation, dries quickly
	 Does not stain or leave a greasy or sticky feeling in the hands. Therefore Xyliderm can be used throughout the day whenever you need
	 Glycerin reduces skin irritation and xylitol speeds up the healing process of ulcers.
Thin and sensitive skin	Does not contain emulsifiers, coloring agents or fragrances, which can irritate the sensitive skin
	Does not sting on the skin.
	Xylitol strengthens the thin skin
Burns and radiated skin	Speeds up the recovery of the skin and prevents bacterial infection.
	The gel is easy and gentle treatment for delicate and damaged skin.
Wounds and ulcers	Xylitol prevents bacterial infection in wounds by breaking the biofilm formulated by bacteria
	 Xylitol speeds up the arising of skin's own protective layer

Xyliderm is also an ideal moisturizer for the whole family:

- After Shaving moisturizes and soothes skin tightness
- Sunburnt skin relieves itching and tightness of the skin
- Dry and scaly skin moisturizes effectively
- Hairy skin spreads easily and does not stain
- Child's skin easy to apply, does not sting
- Well-suited as hand cream and to treat dry and cracked heels
- Also suitable for sensitive skin areas such as around the eyes, as well as before make-up to moisturize the skin (leave in for 15 minutes before applying make-up).
