

FLASH Adapter

True to our training philosophy, delivering a high end, budget friendly, quality solutions for firearms training, Laser Ammo is offering an array of solutions for a realistic at home training device, which helps any level of shooter to overcome the need to pull the charging handle of an AR15 with each shot. This gives a rifle user the ability to train with the Smokeless Range® Simulator on speed transitional drills, and any drill requiring use of multiple follow up shots, all the while experiencing the full cycling of the action and associated recoil, such as they would experience during live fire training.

The LA FLASH is a high-end CNC machined flash suppressor adapter that replaces the stock flash guard on any "off the shelf" Airsoft rifles (with CCW trades), to house the SureStrike™ vibration cartridge, in order to convert the off the shelf airsoft to become a laser emitting training rifle for indoor training.

Activated by the vibration of the Airsoft rifle (operated by green gas, CO₂ or electric), the SureStrike™ can emit a red or IR laser to activate any Laser Ammo electronic target or Smokeless Range® shooting simulator.

Laser Ammo offers a complete AR15 style LM4 rifle that comes pre-installed with the FLASH adapter, and is available in either red or IR. This rifle runs off green gas, provides recoil and full cycling of the action, a true look and feel of an AR15 / M4 including weight and the ability to practice magazine changes, leaving the shooter with a realistic training session. Ideal for civilian, law enforcement, and military markets.
