

SureStrike™ Training Kits

The SureStrike™ is Laser Ammo's brand name for our family of high-end laser training cartridges, aimed to assist any level of shooter with at home dry fire training.

These Class 1 eye-safe laser cartridges are available in either red (visible) or IR (invisible) and are available alone or as part of a kit. The SureStrike™ is used in the shooter's very own firearm, to give immediate feedback of where the bullet would have hit, with every squeeze of the trigger, thus giving the shooter the ability to train with their own gun, trigger, sights and holster, in the most realistic manner possible.

These cartridges are available to fit/be adapted to a wide array of calibers for your own pistol, rifle, and shotgun. The SureStrike™ laser cartridges are firing pin activated (no misfires), and the included action back cap portion of the laser protects your firing pin, so no additional "snap cap" style device is needed. Included in the kits is the UhrSecure Safety System, which consists of a safety pipe, extension, and nut that serve not only as a securement system for your cartridge, but also as a visual indicator that the firearm is clear of ammunition, and thus when installed it is impossible for live ammunition to be chambered into the firearm... ensuring 100% safety with use!

The SureStrike™ includes many advantages over other laser cartridges available in the market, including but not limited to:

- Patented screwless alignment, making it one of the most accurate training cartridges available.
- The best warranty on the market (min of 5,000 shots (or a year))
- Robust with high-quality CNC machined stainless steel.
- Sharp focused glass lens laser rated for 2K hours, for optimal performance
- The action cap includes a sleeping mode for long duration of battery life
- Patented adapter system that adapts the 9mm cartridge to many different calibers
- The only laser that can activate the LaserPET II and the IMTTS targets
- Programmable action back caps, that allows digital bore sighting and multi-model (for boresight as well as dry fire training in one cartridge)
